Photoshop has powerful tools that you won't find elsewhere - whether you're a beginner or a professional. There's no shortage of tutorials on the web, either. The internet is loaded with great Photoshop-related sites, blogs, and resources. So why does Photoshop still remain the de facto industry standard? Photoshop has the most comprehensive set of accelerated or accelerated-type Layers, and they're easy to use. You can combine them into a single object or layer, editing them all as a group, transpose, flip, duplicate, mask, hide or lock layers. PS also has the most efficient interface for working with layers. It's as simple as selecting an area in one layer and using the Direct Selection tool to move it, or adding a second object and duplicating the first as a new layer. All a layer's settings, mask, blend modes and layer properties are automatically updated when you add other layers. There's no need to save layers and reopen them to see the edits. I tried, I fail: I think that E3 is not compatible with LRX and CS6 is not. I tried with E2 and it's possible but very cumbersome. For the E5 I didn't succeed. I tried to share folders and it didn't work. So I can only guess that E3 is not compatible with CS6. I also tried to share files among the computers but it didn't work. It's a big pity. With large files it's impossible. I think that Adobe should have added the chapter''Future proofing' at the time of E2 release. I tried working with CS5 and CS6 on the same computer, and it worked ok for me. I just used two disks. The memory wasn't problem as long as your computer is not a super fast computer like the new i7s. The dark (ambient)room was a very nice feature.

It's a very large soft, but I think that nothing of interest is being added since it's been around for years.

As a result, a novice user would earn the title of "savy user" in a very short time.

Photo Simulation also brings the power of Stop Bokeh and Local Defocus as new full-featured Photo Simulation features. Bokeh is particularly effective with HDR images and it gives you the freedom to dial in the exact results that you want. The Local Defocus effect is even more powerful in that you can choose overdetermined focal pairs and not just specific lens focal lengths. These are all features that can help save a lot of time for everyday photographers. With the rest of the new updates, Learn & Create tools are more easily accessible for both beginners and experts in the field of photography. Auto-annotate tools now come with both basic and advanced settings to help give users as much control as possible, and make your photo editing experiences more tailored to their needs. The legacy Learning Tools have been reworked to make it easier to navigate and quicker to find the precise tool you're looking for. You can have multiple doubles, smart collections and the like set up—but it will make it easier to find precisely what you're looking for at a moment's notice. The final new update for the year is a feature-packed one. The last time an update was this big was the last time that Photoshop itself was called Photoshop. Other more focused updates this year include Photoshop Fix, a tool for fixing problems with your pictures. The new restructure of the notorious Web to CSS toolset allows users to more easily work with CSS design and result files. (You can read more details about it in the official Photoshop blogpost).
